EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Karl Bozicevic on 10/16/07. The application has been amended as follows:

Please cancel claims 11 and 12.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The independent claims recite in part:

taking a full field scatter mask which defines the contribution of scattered radiation to the intensity of the image at a given detector position in terms of the intensity at a plurality of surrounding detector positions;

preparing an adapted scatter mask representing the sum of a plurality of elemental scatter masks each of said plurality of elemental scatter masks corresponding to a different exposure position of said beam and detector relative to said subject, and each of said plurality of elemental scatter masks having values of the full field scatter mask set to zero outside the area of illumination to allow for an effect on scatter due to collimation of the illuminating radiation

The above features, as explicitly recited, and in combination with the other elements of the claim are neither disclosed nor suggested by the nearest prior art of the record.

Prior art Besson (7092482) discloses a scatter correction method but does not disclose the adapted scatter mask steps of the independent claims.

Prior art Dewaele (5651042) discloses a piecewise linear function but does not disclose preparing the adapted scatter mask as disclosed in the independent claims.

Prior art Boone et al. (from applicants IDS) discloses a scatter correction method in mammography. However, he does not disclose summing elemental scatter masks.

Prior art Young et al. (6836570) discloses an image enhancement method for images having collimation fields. He does not disclose the adapted scatter masks steps of the independent claims.

Prior art Highnam et al. (from applicants IDS) discloses computing scatter components but he does not disclose the steps of the independent claims.

Prior art Ito (5883972) discloses creating masks to compensate for irradiation fields. However, he does not disclose the specifics of the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
